

Musab Shaikh

+1-437-966-9676 | musabshaikh.work9@gmail.com | [My linkedin ↗](#) | [My Portfolio ↗](#) | Toronto, Ontario

Full Stack Developer with expertise in Java, Python, Angular, and high-performance backend systems in Agile development. AWS-certified expert in cloud-native microservices, CI/CD automation with research publications in [Elsevier](#) & [IEEE](#). Authorized to work full time in Canada.

SKILLS

- **Languages:** Java, Python, SQL, TypeScript, JavaScript (ES6+), Golang, HTML5, CSS3
- **Developer Tools:** AWS, GCP, Docker, Kubernetes, Terraform, Jenkins, Maven, OAuth2, RabbitMQ, Kibana, JUnit, JMeter, Mockito
- **Additional Tools:** Linux, Ubuntu, GitHub Copilot, Postman, Cursor, IntelliJ IDEA, VS Code
- **Databases:** MySQL, MSSQL, PostgreSQL, MongoDB, DynamoDB, Elasticsearch, Redis
- **Frameworks:** Spring Boot, Flask, Angular, Node.js, Express.js, FastAPI, React.js, Next.js

WORK EXPERIENCE

- **Full Stack Developer** September 2025 – Present
Royal Bank of Canada Toronto, Canada
 - Built and delivered an internal **Flask RestX + Angular** tool now used across all bank colleagues, integrating **Active Directory**, an **ORM**-backed database, and **REST APIs** for third-party tools.
 - Developed **15+ Angular components** including a unified search feature with reactive forms, improving org-wide search efficiency.
 - Upgraded **Angular** from v14 to v21 incrementally, ensuring zero regression through systematic validation and automated testing.
 - Developed **20+ REST API** endpoints in **Python/Flask RestX** integrating **Active Directory** and **ORM**-based database models.
 - Resolved **N+1** query problem by refactoring per-record database calls to batch loading with in-memory dictionary lookups, reducing queries by **99.8%** (from 1,903 to 3) and cutting execution time from 40+ seconds to under 5 seconds, eliminating nginx 502 timeouts.
 - Wrote **60+** unit tests for **Python/Flask** backend (**pytest**) achieving **82%** code coverage, and **75+** unit tests for **Angular** frontend (**Jasmine/Karma**) achieving **78%** coverage, catching regressions before reaching CI pipelines.
 - Implemented **JMeter** performance tests for 35+ backend APIs and **Cypress** E2E tests for frontend dashboard components.
 - Redesigned deployment from push-to-dev to promotional model, reducing deployment risk for an organization-wide tool.
 - Architected **Azure DevOps** and **GitHub Actions CI/CD** pipelines to build **Docker** images to be deployed on **Kubernetes** pods.
 - Resolved **MSSQL** schema drift between staging and production by comparing environments and applying differential **SQL** updates.
- **Software Engineer** September 2021 – July 2024
Capgemini Technology Services India Limited Mumbai, India
 - Developed and maintained **Spring Boot** microservices with **Spring MVC** and **Spring Data JPA**, ensuring high availability.
 - Developed a **Java** Spring Boot multi **Microservices** platform, exposing 30+ versioned **RESTful** APIs on **MySQL** via **JPA/Hibernate**.
 - Added **RabbitMQ** queues and **Redis** caches, lowering p95 latency from 400 to 250 ms while sustaining 3k req/s at 99.9% availability.
 - Designed polyglot persistence using **MySQL** for transactions, **MongoDB** for unstructured data, and **AWS S3** for object storage.
 - Optimized database queries and indexed frequently accessed fields resulting in a 40% reduction in average query execution time.
 - Implemented **Spring Security** with **JWT** auth, **TLS** encryption, and thorough unit testing, reducing vulnerabilities by 85%.
 - Built **JUnit/Mockito** test suites achieving 90%+ coverage, including unit, integration, and edge case tests enabling automated regression.
 - Integrated **Log4J** with **AWS CloudWatch** for alerting, reducing vulnerabilities 85% and incident response time 60%.

EDUCATION

- **Master of Engineering in Software Engineering** Graduation Date: September 2025
University of Western Ontario London, Ontario, Canada
- **Bachelor of Engineering in Electronics and Telecommunications Engineering** Graduation Date: September 2021
Goa University Margao, Goa, India

PROJECTS

- **Land Cover Mapping Using PolSAR (Satellite) Images:** [GitHub Repository](#)
 - Built with **Python**, **PyTorch U-Net**, **TensorFlow**, and **polsarPRO** for **semantic segmentation** of satellite radar images into 4 land cover categories.
 - Developed **deep learning** pipeline for terrain classification using synthetic aperture radar data with manual dataset labeling and cross-validation.
 - Co-authored two peer-reviewed publications in [Elsevier](#) and [IEEE](#) on remote sensing and geospatial image analysis.
- **Rental Listing Popularity Prediction:** [GitHub Repository](#)
 - Built with **Python**, **BERT**, **Random Forest**, **XGBoost**, and **RNN** models for multimodal data analysis using text, images, and structured features.
 - Developed **Machine learning** pipeline to predict NYC apartment interest levels with **98% accuracy** through feature engineering and sentiment analysis.
 - Applied advanced techniques including **class imbalance** handling, model fine-tuning, and **ensemble** methods for optimal prediction performance.

CERTIFICATIONS

- **AWS Certified Developer Associate** Validity: July 2023–July 2026
Validation Number: BNVZP64CX1QEISWT
